Solving the Riddle of International Electricity

Traveling With Electronics?

Tired of worrying if you have the correct adapter? Tired of worrying if your electronics are dual voltage? We have the solution. The Walkabout Solution™ automatically adjusts incoming voltage, whether if you are in a 110-120V country (Like North America) or 220-240V country. (Everywhere else.) Output voltage is always correct for North American products. Even better, the built-in USB port also charges cell phones and iPads, so two items can be charged at once. The built-in adapters work worldwide -- the enclosed Euro adapter even allows for recessed European connections. Indicator lights indicate power status for AC and USB power ports. Protected by a thermal detection circuit, which will shut the unit off if it gets too hot. Just let the unit cool and plug back in. Fuse protected. Tiny

and lightweight: Product dimensions: 1.9 x 1.6 x 1.8 inches; 3.8 ounces. USB charging current is 1000mA continuous. Laptop, smart phone, iPad, Kindle -- it's all you need. No dual voltage worries. No adapter worries.

#301A The Walkabout Solution \$29.95

Confused About International Electricity?

Everybody is. What converter do I need? What adapter do I need? What's the difference between an adapter and a converter, anyway? Even computer hackers and rocket scientists throw up their hands trying to solve this dilemma. We've solved it. Our Hi-Lo Combination

Converter/Transformer Kit is the solution to a problem only modern mankind has faced. Contains a dual circuit converter/transformer with five plug-in adapters which fit almost every 2-pin (non grounded) electrical outlet Homo sapiens has invented. The converter/transformer has a high switch for appliances between 50 and 1650 watts and a low switch for equipment under 50 watts.

Accepts 2-pin, polarized equipment. Low setting can be used for items like cell phones, camera or Kindle chargers; high setting is for non-electronic items like hair dryers. Our Hi-Lo Converter/Transformer is the cream of the crop, and contains a safety fuse to prevent damage to appliances. Everything fits into a convenient carrying case. Surprisingly small and lightweight: 5 1/2 x 3 x 2 inches. Weight 14 oz.

#1004 HiLo Combination Converter / Transformer Kit \$34.00

All-in-One Travel Adapter Plug with Built-in Surge Protector

Our All-in-One Travel Adapter Plug with Built-in Surge Protector is packed with features. Offers surge protection on both 110 (North America) and 220V (International) power, so you can use it anywhere. Has an EMI/RFI filter to protect sensitive electronic equipment. Built with a universal input – accepts non-grounded or grounded North American plugs, as well as British, European, and many others. (Click picture of product to see all styles of plugs accepted.)

Perhaps the best part is that four different electrical adapters are built in so you don't need separate adapters for most countries, including all the countries of Europe, China, Australia, and most others. Very small and lightweight: 3.8 ounces; 3 x 1.5 x 1.5 inches. Power indicator light and safety shutters.

Electrical rating: 125V 15A, 250V, 10A. Clamping

voltage: 775V, dissipation 149.8 joules. The All-in-One does not convert voltage and is for use only with dual voltage (100-240V) appliances.

#TS237AP All-in-One Travel Adapter Plug with Built-in Surge Protector ~~\$19.95~~ Sale \$16.95

NEW! All-One Surge Protector with USB. All the same features of the regular All-in-One but with an additional USB port for cell phones, iPads, iPods, and other items.

#TS237USB All-in-One Surge Protector with USB ~~\$24.95~~ Sale \$20.95
